

Sopra Steria integrates generative AI tools into its development platforms

Paris, 18 July 2023 – Sopra Steria, major Tech player in Europe, is stepping up its efforts in the field of AI and investing heavily in generative AI. In particular, the Group will merge all its tools into a single platform called Engine.

Generative AI has the potential to significantly impact productivity and performance in a number of areas. Recognising the paradigm shift brought about by this technological revolution, and building on its previous AI experience, Sopra Steria is ramping up its investments in artificial intelligence, which are coordinated through a cross-disciplinary programme aimed at promoting the adoption of AI within the company and assisting clients in developing reliable solutions.

Its investments target the following priorities:

- Rapidly integrating AI technologies throughout the software engineering business in order to optimise software development and maintenance.
- Establishing a European skills hub bringing together AI experts in order to build up comprehensive expertise in the field.
- Being able to support Sopra Steria's clients as they implement and roll out generative AI in their processes.
- Working in close cooperation with Sopra Steria's partners to implement the best technological solutions combining research, classic AI, and generative AI.
- Preparing for and checking compliance with the ethical standards and regulations required to implement AI solutions.

Boosting productivity and improving collaborative work

Sopra Steria will bring together all of its AI-related methods and tools in order to expand the capabilities of its software engineering platform, Engine. This expanded platform will cover all collaborative software, code generation and testing tools, in particular. Its aim will be to boost productivity, reduce time to market, and enhance the quality of software solutions developed for clients. Engine is already available to all of the Group's 10,000 developers worldwide. It will subsequently be made available to all Group employees.

Mohamed Sijelmassi, Chief Technology Officer at Sopra Steria, commented: *"AI is a key component of our industry and has been an integral part of our solutions for over 5 years. The recent acceleration in this field has led us to merge our existing activities and commission our tools and methodologies on a single platform. Engine is a highly scalable platform that will enable our teams, in addition to our 4,000 Data and AI experts, to fully assimilate AI, so that we can increase our productivity and deliver faster results for our customers."*

About Sopra Steria

Sopra Steria, major Tech player in Europe recognised for its consulting, digital services and software development, helps its clients drive their digital transformation and obtain tangible and sustainable benefits. It provides end-to-end solutions to make large companies and organisations more competitive by combining in-depth knowledge of a wide range of business sectors and innovative technologies with a fully collaborative approach. Sopra Steria places people at the heart of everything it does and is committed to putting digital to work for its clients in order to build a positive future for all. With 50,000 employees in nearly 30 countries, the Group generated revenue of €5.1 billion in 2022.

The world is how we shape it
